

The following is a guide that covers how to set up your new **Equinox** template on your Joomla site. Here you can find an overview of the files included in the

### **Equinox**

release and instructions on installing and activating the template in your Joomla install.

[Launch the Joomla Template Installation Video Tutorial now!](#) (Requires Flash) **Download**

### **ding the Equinox Files**

The first step is to download all of the files that will be needed to install your template, custom modules, as well make modifications. Here is a quick explanation of each of the available files in the **Equinox** release.

- **Equinox Template** (*rt\_equinox\_j15.tgz*) This file is the template package you will use to install your template into Joomla.
- **Equinox Custom Extensions** (*equinox\_extensions\_j15.zip*) This package contains each of the individual custom extensions included in the Equinox template release.
- **Equinox Source PNG's** (*equinox\_sources.zip*) This zip contains the source png's for making modifications and customizations to the images in the template as well as the logo font. There are additional sources for the transparent background, buttons, typography and headers. You will need an image editing software (preferably Adobe/Macromedia Fireworks) to utilize the Source PNG files.

### **Step 1 - Using the Joomla installer**

Go to your Admin control panel for your site. In the Menu at the top, go to **Extensions** -> **Install/Uninstall**

. Next browse for your

**rt\_equinox\_j15.tgz**

file you downloaded and then click

**Upload File & Install**

. Now

**Equinox**

is installed and in your template list. You should observe an introductory page in which you select

**Continue**

.

### **Step 2 - Making Equinox your default template**

Next, from your admin control panel, go to **Extensions** -> **Template Manager**. This will pull up the list of your installed templates. Find Equinox on the list and select the radio button to the left and then click

**Default**

## Installing Equinox
